

IN THE CLAIMS

Please amend the claims to read as follows:

Listing of Claims

1-10. (Canceled).

11. (New) A transmission method comprising:

receiving information which is transmitted from a base station apparatus and which relates to a number of duplications of a transmission packet; and
transmitting the transmission packet and a number of duplicated transmission packets matching the information which relates to the number of duplications, using a resource selected at random from resource candidates.

12. (New) The transmitting method according to claim 11, wherein the resource candidates are one of a timing, transmission frequency and spreading code.

13. (New) A transmitting apparatus comprising:

a receiving section that receives information which is transmitted from a base station apparatus and which relates to a number of duplications of a transmission packet; and
a transmitting section that transmits the transmission packet and a number of duplicated transmission packets matching the information which relates to the number of duplications, using a resource selected at random from resource candidates.

14. (New) An integrated circuit comprising:

a reception controlling section that controls processing of receiving information which is transmitted from a base station apparatus and which relates to a number of duplications of a transmission packet; and

a transmission controlling section that controls processing of transmitting the transmission packet and a number of duplicated transmission packets matching the information which relates to the number of duplications, using a resource selected at random from resource candidates.
